Audio information is recorded on an information medium in a format which is an expansion of the RTR (recording/reproducing DVD) standards. A "cell for audio information" is defined as management information about information recorded on the information medium and as a reproduction unit for audio information similarly to the RTR standards. A PGC (program chain) at an upper level thereof has "reproduction order" being the relation with other video information (movie cell) and/or still image information (still image cell).
